

Project Architecture & Management

Building an Effective Project Management Process to Ensure Measurable Success

Project Administration and Management can be a time consuming and exhaustive activity. Do you have the tools and structures in place to take advantage of all your project's resources? Does your project management process add value or does it create additional demands on your precious time? Worse yet, do your projects – just like an expired parking meter - seem to stall and demand additional investments without accomplishing your intended result? Whatever your scenario, our **Project Architecture & Management Services** can turn your unsuccessful project management process into a value adding productive tool for measuring and managing your business and financial activities.

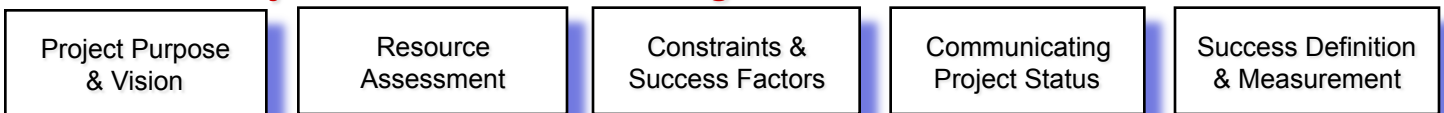

Our valuable workshops, renowned thought leadership, and experienced resources combined with your key personnel can help you turn your ineffective and exhaustive management procedure into an organizational activity with **long-term recurring benefits**. Through a review of your project constraints, business, & technical requirements, current communication & project maintenance capabilities, we will work with you to **transfer the knowledge and skills** necessary to **reduce your ongoing effort & costs** required to manage and administer your most important projects!

Our **Project Architecture & Management Services** provides you with significant renewable value including:

- Methodologies for enhancing future projects,
- Effective & cost efficient project management,
- Widespread acceptance & enhanced morale from your project participants,
- Cost effective project management practices, and
- Metrics for communicating and managing project performance and success!

Utilizing our **Project Architecture & Management Services**, you get a complete appraisal of:

- Ensuring the project's vision, objectives & benefits are understood across your organization!
- Establishing the project processes, requirements, & resources necessary to ensure a successful completion!
- Identifying the drivers, constraints, roadblocks, & critical components of the right project management approach for your organization!
- Documenting the key indicators, measures, methods, & mechanisms that can provide proactive visibility to project problems!
- Ensuring your projects are within scope, on target, adhering to your objectives, and enhancing your organization!
